

# Further Development and Validation of the Cerebellar Neuropsychiatric Rating Scale (CNRS)<sup>®</sup>

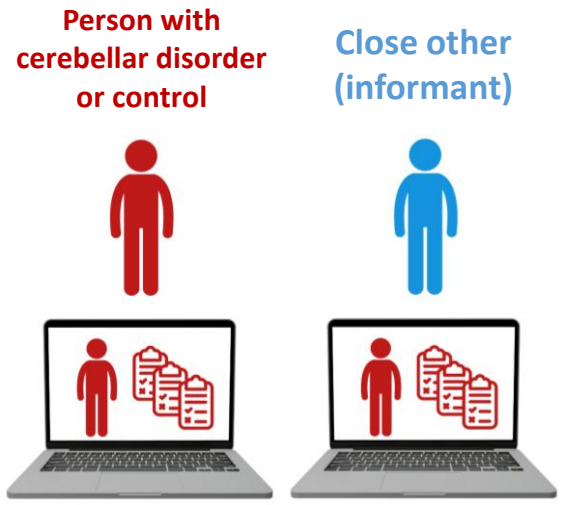

Louisa P. Selvadurai\*, Anna L. Burt\*, Maureen P. Daly, Janet C. Sherman, Jeremy D. Schmahmann

## 1. Creating a questionnaire for neuropsychiatric symptoms

## 2. Testing the questionnaire

### Preliminary findings:

- More neuropsychiatric symptoms in people with cerebellar disorders than controls
- Agreement between patients and their informant – depends on the question

A promising clinical tool to help people with ataxias
